## Functional Skills

**Languages** - Python, Java, JavaScript, HTML, CSS, C++, Bash, SQL

**Software** - Windows 10, Linux/Unix, Git/Github, Microsoft Office Suite, Apache HTTP server, Docker

**Databases** - Oracle SQL Developer, MongoDB, MySQL

## Education

**Ryerson University**

Sept 2019 – May 2024

- **Computer Science** – Honours BSc. (Co-op)
- **CGPA** – 3.92, Dean's List (2019-current)
- **Relevant Courses** – Data Structures & Algorithms, Database Systems, Software Engineering, Computer Security

## Work Experience

---

### VIPER 6 - Freelance Fullstack Developer

- Created software used to keep track of average monthly sales in excess of \$10,000 over the last 6 months.
- KPIs created and automatically calculated using a python script that accesses the database. Some KPIs include "Cars done per hour", "Daily sales", "Monthly Growth". Graphs and Pi Charts automatically created at the end of each month showing Key Statistics at the request of the business.
- Data collected from application stored in database used to analyze business growth showed a 70% YoY increase.

## Projects

---

### Job Searcher | [Github](#)

- A web app with a clean focused design allowing users to track their journey in the wild world of applications.
- Users are able to create an account to login and create cards for each job application that can then be sorted by date applied or application status (pending, interview, rejected)
- Technologies: **MERN** Stack ( **M**ongoDB, **E**xpressJS, **R**eact, **N**odeJs)
- Other: Git/Github, Postman API Platform.

### Retail Store System Manager | [Github](#)

- Collaborated with a team of 2 developers to create a comprehensive system manager for retail establishments to keep track of inventory, transactions, as well as employees across multiple stores using a central database.
- Technologies: **OracleSQL**, **Python**, **Tkinter**

### Python CLI Stock Portfolio Tracker | [Github](#)

- A user friendly command line app that allows users to create and track their stock portfolio.
- Displays up to date information on requested stocks via the IEX Cloud API.
- Technologies: **Python**, **Sqlite3**, **Postman API Platform**

### RUofTHacks VIII (Hackathon)

- A django web app that allows users to track their workout and provide exercise recommendations via API.
- Collaborated on a team with 2 other developers, mostly working on the front end, and testing of the app.
